SpeechExec

You'll quickly become accustomed to the benefits of Philips SpeechExec Pro, which improves the lives of all of those involved in the documentation process. It provides authors with easy-to-use functionality for organizing recordings clearly and transparently. Secretaries are equipped with advanced professional transcription features and accessories, while IT managers benefit from the reduced demand on financial and human resources.

SpeechExec Pro has been developed in close collaboration with partners and customers and benefits from Philips' in-depth process knowledge of dictation-intensive environments. It has been designed for use with Philips input devices, delivering a one-stop digital dictation solution; from mobile and desktop recording devices, dictation and transcription software through to headphones and foot pedals for stress-free transcription.

PHILIPS

SpeechExec - The cornerstone of your digital dictation solution

The network-based dictation and transcription software SpeechExec takes into account the requirements of professional digital dictation users and provides advanced features such as encryption and seamless integration with medical and legal IT systems. SpeechExec facilitates the sharing and archiving of dictations and streamlines communications between author and secretary, further adding to the benefits of our digital dictation devices.

Featuring a modern and intuitive user interface, SpeechExec boasts the latest digital dictation technology. The solution can be used on a local network or via the Internet; dictation sound files can be automatically transferred via a company network, sent by e-mail or uploaded onto an FTP server, depending on your requirements. Authors can quickly and easily define urgent jobs and track work in progress, and the system will notify them once urgent jobs have been completed. Transcriptionists benefit from a clear job overview, ensuring efficient workload planning, and receive a new job alarm, allowing them to begin transcription immediately. Job data can also be accessed during typing and the built-in keyboard control eliminates mouse usage.

Sensitive patient or client data are protected through file encryption, so that only authorized persons can access dictated information. As a network installation, the new software can be centrally installed, thus eliminating time-consuming software administration and maintenance on individual PCs.

All in all, this future-proof dictation and transcription software is the basis for building an efficient digital dictation infrastructure. It unites authors, secretaries and IT managers under one roof, allowing key processes in your organization to be accelerated.

SpeechExec – The essentials:

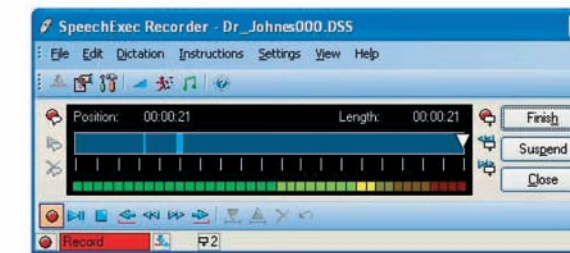

- Innovative dictation and transcription software accelerates key processes
- Available in tailored packages specifically designed for authors and transcriptionists
- Ergonomic controls used during recording and transcription eliminate stress and errors
- Robust and future-proof technology guarantees a long product lifecycle
- Intuitive user interface makes it quick and easy to learn
- Highest data protection through individual user rights and encryption
- Network-based architecture reduces costs of software administration and maintenance
- .dss file format ensures crystal-clear sound quality and minimum file size

User configuration - select user configuration file

■ Authors

Take control of your dictations

- Efficient handling of sound files from dictation to archiving adds to your peace of mind.
- Priority definition allows authors to easily define urgent jobs.
- Spoken instructions improve communication with your secretary.
- Data protection (encryption/decryption) allows only authorized persons to access your documents.
- Job status information allows you to track work in progress.
- "Job started" and "job finished" alarms ensure no time is wasted.
- Visible and audible record notification eliminates mistakes and data loss.

■ Transcriptionists

Manage your workload

- Clear job overview allows more efficient organization and planning of workloads.
- Access to job information during transcription.
- "New job" alarm for immediate transcription start.
- Flexibility to edit author mistakes ensures highest accuracy.
- Foot control allows full keyboard control eliminates mouse usage.
- Excellent DSS sound quality for a better understanding.
- Ergonomic headphones lessen physical stress.

■ Administrators

Have total confidence in your technology

- Network-based installation saves resources.
- Support of Terminal Server environments
- Easy to maintain, thus reducing costs of ownership.
- Considerable system flexibility allows you to react to unexpected events, such as sickness and staff fluctuation.
- Encrypted data transfer complies with latest IT security standards.
- User access rights prevent mistakes or misuse of data.
- Pre-configuration reduces user interaction to a minimum.
